

Stem Ecosystem x Mersive Solstice Pod

This guide will take you through how to connect the Mersive Solstice Pod with Stem devices for a BYOD setup in your meeting room.

Category: Wireless Screen Share

What is the Mersive Solstice Pod?

This is a wireless conferencing solution designed to enable BYOD devices to connect to a display wirelessly for screen sharing.

Why we're testing this device

We are testing compatibility with this device and our audio endpoint devices to determine if it is a practical solution for user integrations that require wireless BYOD capabilities.

How we're testing this device

We tested this device with each of our audio products by connecting them to the main component of the Kramer Via Connect Plus via USB, and installing the software necessary to share our screen wirelessly on a laptop. We also connected an HDMI to the display from the device, as well as a network connection. The laptop is on the same network, and connects wirelessly.

Price (MSRP): \$1,199

Outcome: Success. This device passes audio, and shares screens wirelessly.

How It All Connects
